Positioning Guide
Design

Tandem Machine
Operation

Ensuring waistband buttonhole positioning accuracy with interlining feeding and leftover interlining retrieving functions.

- Equipped with pneumatic presser to stabilize the waistband and thus minimizing misalignment.
- Automatic feeding and retrieving of leftover interlining during sewing.
- Positioning guide design simplifies operator handling.
- Operator no longer need to hold the waistband during sewing cycle, enabling one sewer to operate two machines in tandem.

SPECIFICATIONS

Sewing Machine Head
JUKI LBH-1790S

Output (pcs/ hr)
175

Stitch Type
Lockstitch (#301)

Changeover Time (m)
1

Compressed Air Requirement (Mpa)
0.5
